

AISSMS

INSTITUTE OF INFORMATION TECHNOLOGY [I.O.I.T.]

ADDING VALUE TO ENGINEERING

An Autonomous Institute Affiliated to Savitribai Phule Pune University
Approved by AICTE, New Delhi and Recognised by Govt. of Maharashtra
Accredited by NAAC with "A+" Grade | NBA - 5 UG Programmes

INTERNSHIP REPORT

ON

"REDCYBERFOX LLP"

Submitted in Partial Fulfillment of the Requirements for the Award of the Degree of

Bachelor of Technology (B.Tech)

in

Computer Engineering

Submitted by

Omkar Maruti Jaykar

PRN / Seat No.: 22410051

Under the Guidance of

Dr. Sarika Zaware

Computer

Internship Organization

REDCYBERFOX LLP

Pune, Maharastra

Internship Duration: 3 months

From: 05/01/2026 To: 05/04/2026

Academic Year: 2025 – 2026

CERTIFICATE

This is to certify that, **Mr./Miss** ----- has satisfactorily carried out and completed the internship, at -----from 05/01/2026 To: 05/04/2026 for a total period of ----- months .

It is submitted in partial fulfillment of the prescribed syllabus of BTech -----
----- .

Internal Guide / Mentor

HOD

DECLARATION

It is hereby declared that an Internship in "-----" is genuine work and it is not directly or indirectly copied from other Internship reports, resources, or published work.

This is original and authentic work and has not been submitted earlier to another university for entitlement of any degree by me or others and Internship report has not been from any book or journalism website directly or indirectly.

The references used in this report work do not violate state, country, international copy rights act, international property rights act patent act, etc.

Name of the student: Omkar Maruti Jaykar

PRN: 22410051

Place: Pune

Date:

ACKNOWLEDGEMENT

It is indeed a great pleasure and moment of immense satisfaction for me to present an internship in “-----” amongst a wide panorama that provided us inspiring guidance and encouragement, given the opportunity to thanks those who gave me their indebted assistance. I wish to extend my cordial gratitude with profound thanks to our internal guide Prof. ----- for his / her everlasting guidance. It was his /her inspiration and encouragement which helped me in completing my internship report. My sincere thanks and deep gratitude to Program Coordinator, -----and other faculty members; but also, to all those individuals involved both directly and indirectly for their help in all aspect of the internship. I would express my sincere thanks to our Institute's Principal Dr. P. B. Mane for always guiding and supporting me.

Introduction

1.1 Overview of Internship

Internships are an essential part of engineering education as they bridge the gap between theoretical knowledge and practical industry experience. The internship provides students with an opportunity to apply academic concepts in real-world situations and develop professional skills required in the IT industry.

This internship was focused on **Frontend Web Development**, which is the part of web development responsible for designing and developing the user interface of websites and web applications. Frontend development plays a crucial role in determining how users interact with digital platforms. It involves creating visually appealing, responsive, and interactive interfaces using modern web technologies.

During this internship, various frontend technologies such as **HTML, CSS, JavaScript, and React** were studied and implemented in practical projects. The training started with basic web development concepts and gradually progressed toward advanced topics such as responsive design, component-based development, API integration, and deployment of web applications.

The internship also provided exposure to real-world software development processes such as project planning, debugging, version control, and collaboration using Git and GitHub. In addition, the internship helped in understanding how professional software development teams operate and how different departments work together to deliver quality products to clients.

Overall, the internship played an important role in enhancing both technical and professional skills, preparing students for future careers in the software development industry.

1.2 Objectives of Internship

The main objective of this internship was to gain practical knowledge of frontend web development and understand the workflow followed in the IT industry.

The specific objectives of the internship were:

- To understand the fundamentals of web development and the role of frontend technologies in building websites.
- To learn how to design and structure web pages using HTML.
- To develop attractive and responsive layouts using CSS.
- To implement dynamic functionalities using JavaScript.
- To learn modern frontend frameworks such as React for building scalable web applications.

- To understand responsive design techniques that ensure websites work across different devices such as desktops, tablets, and mobile phones.
- To gain experience working with version control systems such as Git and GitHub.
- To understand the process of debugging, testing, and optimizing web applications.
- To learn the process of deploying web applications on hosting platforms.
- To improve problem-solving, communication, and teamwork skills in a professional environment.

Through these objectives, the internship aimed to provide comprehensive training in frontend development and prepare students for industry-level work.

1.3 Duration and Location of Internship

The internship was conducted for a period of **3 Months**, starting from **5 January 2026 and ending on 30 April 2026**. The internship provided practical exposure to the real-world working environment in the field of software development, particularly in **Frontend Web Development**.

The internship was carried out in the **Frontend Development Department** of the organization. During this period, the intern participated in various training sessions, project development activities, debugging tasks, and team discussions related to frontend technologies.

The working hours of the internship were **11:00 AM to 6:00 PM**, during which multiple activities such as learning new technologies, implementing frontend components, and collaborating with team members were performed.

The internship was conducted at the following location:

Working Address:

Akurdi, Pune, India – **411044**

This location served as the primary workplace where training sessions, project development tasks, and meetings with mentors and team members were conducted. The internship environment provided an opportunity to interact with experienced developers and gain practical knowledge about the workflow of software development in a professional organization.

The duration of the internship allowed sufficient time to learn different frontend technologies, work on projects, and understand the development lifecycle followed in the IT industry.

1.4 Scope of Internship

The scope of the internship involved gaining hands-on experience in developing modern web interfaces and understanding the tools and technologies used in frontend development.

The main areas covered during the internship include:

- Designing and structuring web pages using HTML.
- Styling web pages using CSS and modern frameworks such as Tailwind or Bootstrap.
- Implementing interactivity using JavaScript.
- Developing modular user interfaces using React components.
- Managing data and application state in frontend applications.
- Implementing form validation and error handling.
- Integrating external APIs to fetch and display dynamic data.
- Debugging frontend errors and improving performance.
- Using Git and GitHub for version control and collaboration.
- Deploying web applications using hosting platforms.

The internship also provided exposure to industry best practices such as code optimization, UI/UX improvements, testing procedures, and documentation standards.

The overall scope of the internship helped in building a strong foundation in frontend development and understanding the complete lifecycle of web application development.

Organization Profile

2.1 Overview of the Organization

REDCYBERFOX LLP is a technology company that provides comprehensive digital solutions in the fields of cybersecurity, web development, digital marketing, and IT infrastructure services. The company focuses on helping organizations secure their digital assets while improving their technological capabilities and online presence.

The company aims to empower businesses by providing reliable and secure technology solutions that support their growth in the digital environment. Its services help organizations protect their systems from cyber threats, develop secure web applications, and manage their IT infrastructure effectively.

The organization follows a “Security First” approach, meaning that security practices are integrated into every solution developed by the company, including software development, infrastructure setup, and digital platforms.

The company works with modern technologies and provides customized solutions based on the requirements of different clients. Through innovation and continuous improvement, the organization aims to build strong digital ecosystems for businesses and institutions.

2.2 History and Growth

REDCYBERFOX LLP was established with the vision of providing advanced cybersecurity and IT solutions to organizations operating in the digital world. The company focuses on building secure, scalable, and efficient technological systems that help businesses operate safely and effectively.

Over time, the company has expanded its services beyond cybersecurity to include web development, digital marketing, and IT infrastructure management. This integrated approach allows the company to provide complete digital solutions to clients.

The organization is led by experienced professionals who specialize in cybersecurity and network protection. The founders include:

- Rohit Jagtap – Designated Partner
- Rushikesh Hapse – Designated Partner

Their vision is to build strong digital defense systems that protect organizations from cyber threats while enabling technological growth.

The company has continuously evolved by adopting modern technologies and innovative practices to provide better solutions for clients.

2.3 Organizational Structure

The organizational structure of REDCYBERFOX LLP is designed to ensure efficient collaboration between different departments. The structure includes several key teams that work together to deliver high-quality solutions.

Management Team

The management team is responsible for strategic planning, business operations, and decision-making processes.

Cybersecurity Team

This team focuses on identifying vulnerabilities, performing penetration testing, and implementing security solutions to protect systems from cyber threats.

Web Development Team

The web development team designs and develops websites and web applications using modern frameworks and technologies.

Digital Marketing Team

This team helps businesses improve their online visibility through search engine optimization (SEO), social media marketing, and advertising strategies.

IT Infrastructure Team

This department manages the hardware, networking systems, and cloud infrastructure used by organizations.

Each department collaborates closely to ensure that projects are completed efficiently and meet the requirements of clients.

2.4 Products / Services Offered

REDCYBERFOX LLP offers a wide range of services designed to support businesses in maintaining secure and efficient digital environments. The company mainly operates in four major service areas.

1. Cybersecurity Services

Cybersecurity is one of the core areas of the company. These services help organizations protect their digital systems from cyber threats and attacks.

Main cybersecurity services include:

- Ethical Hacking
- Vulnerability Assessment and Penetration Testing (VAPT)
- Application Security Testing

- Endpoint and Network Security
- Cybersecurity Consulting and Advisory

These services help businesses identify security weaknesses and implement solutions to prevent data breaches and cyber attacks.

2. Web Development Services

The company also provides web development services that help organizations build secure and scalable web platforms.

These services include:

- CRM Development
- CMS Development
- ERP Development
- E-Commerce Development
- Custom Software Development

The web development team focuses on creating modern and responsive applications using advanced frameworks and technologies.

3. Digital Marketing Services

Digital marketing services help businesses promote their products and services online.

These services include:

- Search Engine Optimization (SEO)
- Pay-Per-Click Advertising (PPC)
- Social Media Optimization (SMO)
- Online Marketplace Management
- Digital Marketing Consultancy

These strategies help businesses improve their online presence and attract more customers.

4. IT Infrastructure Services

The company also provides IT infrastructure services to support organizations in maintaining efficient and secure IT systems.

These services include:

- Desktop and Laptop Installation
- Workstation Setup
- Printer and Peripheral Setup
- Cloud Solutions and Data Backup
- Hardware Maintenance and Upgradation

These services ensure that organizations have reliable and well-maintained IT systems for daily operations.

2.5 Departments and Functions

The organization operates through several departments, each responsible for specific functions.

1. Cybersecurity Department

This department focuses on protecting digital systems and networks from cyber threats. The team performs vulnerability assessments, penetration testing, and security monitoring.

2. Web Development Department

This department develops websites and web applications for clients using modern web technologies.

3. Digital Marketing Department

The digital marketing department helps businesses increase their online visibility through marketing campaigns and SEO strategies.

4. IT Infrastructure Department

This department manages the hardware, networking systems, and cloud infrastructure required for business operations.

Each department works together to ensure that clients receive secure, efficient, and innovative technology solutions.

Internship Details

3.1 Introduction to Internship / Training Program

The internship training program at REDCYBERFOX LLP was designed to provide practical knowledge and industry exposure in the field of Frontend Web Development. The objective of the training program was to help interns understand how modern web applications are designed, developed, tested, and deployed in a professional software development environment.

The training program started with the fundamentals of web development, including the structure of web pages and styling techniques. As the internship progressed, more advanced topics such as responsive web design, JavaScript programming, and frontend frameworks were introduced.

During the initial stage of the internship, the focus was mainly on learning the basic technologies used in frontend development such as HTML, CSS, and JavaScript. These technologies form the foundation of web development and are essential for building interactive and visually appealing websites.

In the later stages of the internship, the training moved towards React, which is a modern JavaScript library used to build dynamic and scalable web applications. The intern learned about component-based development, state management, routing, and API integration.

Apart from technical learning, the internship also involved participation in team discussions, project planning sessions, debugging tasks, and deployment activities. These experiences helped in understanding the complete workflow followed in a software development company.

The internship program was structured in multiple phases, including:

- Basic web development training
- Practical assignments and exercises
- Mini project development
- Final frontend project development
- Testing and deployment of the project

This structured approach helped the intern gain a comprehensive understanding of frontend development practices.

3.2 Tools, Technologies, and Software Used

The following programming languages were used during the internship:

HTML (HyperText Markup Language)

HTML was used to create the structure of web pages. It defines elements such as headings, paragraphs, images, links, forms, and tables.

CSS (Cascading Style Sheets)

CSS was used to style web pages and improve the visual appearance of websites. It was used for designing layouts, colors, fonts, spacing, and responsive elements.

JavaScript

JavaScript was used to add dynamic functionality and interactivity to web pages. It helped in handling user actions, form validation, and manipulating webpage content dynamically.

Frameworks and Libraries

React.js

React was used to build modern web applications using a component-based architecture. It allowed the development of reusable UI components and improved application performance.

Tailwind CSS / Bootstrap

These frameworks were used to simplify CSS development and create responsive layouts efficiently.

Development Tools

Visual Studio Code (VS Code)

VS Code was used as the primary code editor during the internship. It provides features such as syntax highlighting, extensions, debugging tools, and version control integration.

Browser Developer Tools

Developer tools available in browsers were used to inspect elements, debug JavaScript code, and test responsive layouts.

Version Control System

Git

Git was used to track changes in the code and manage different versions of the project.

GitHub

GitHub was used for repository management and collaboration. It helped in sharing code, managing project versions, and maintaining project history.

Deployment Platforms

To host and test the web applications online, deployment platforms such as:

- Netlify
- Vercel

were used during the internship.

These platforms helped in deploying static websites and frontend applications easily.

3.3 Description of Work Assigned

During the internship at REDCYBERFOX LLP, several tasks and assignments were given to develop practical frontend development skills.

The major activities performed during the internship include the following:

Learning Frontend Fundamentals

In the initial phase of the internship, the focus was on understanding the fundamentals of web development. The intern learned how to create structured web pages using HTML and style them using CSS.

Simple web pages were created to practice page layout design, including headers, navigation menus, content sections, and footers.

Responsive Web Design

The intern learned how to design responsive websites that adapt to different screen sizes. Media queries and responsive frameworks were used to ensure that websites work properly on mobile devices, tablets, and desktops.

A responsive landing page was created as part of the training exercises.

JavaScript Programming

JavaScript was used to add dynamic features to web pages. The intern practiced concepts such as variables, loops, conditions, arrays, and functions.

Interactive features such as form validation, button click events, and dynamic content updates were implemented using JavaScript.

Mini Project Development

As part of the learning process, a mini project was developed using HTML, CSS, and JavaScript. Examples of such projects include a calculator application or a to-do list application.

These projects helped in understanding how different technologies work together to create functional web applications.

React Application Development

In the advanced phase of the internship, React was introduced for building modern web applications.

The intern learned how to:

- Create React components
- Use props and state
- Handle user events
- Implement conditional rendering

- Use React hooks such as useState and useEffect
- Implement routing using React Router

A small React application was developed to practice these concepts.

Debugging and Testing

Debugging is an essential part of software development. During the internship, various frontend errors were identified and fixed using browser developer tools.

Testing was also performed to ensure that the application works properly across different browsers and devices.

Deployment of Web Application

In the final phase of the internship, the developed project was deployed on online hosting platforms such as Netlify or Vercel. Deployment allowed the application to be accessed through a public URL.

This process helped in understanding how web applications are published and maintained online.

3.4 Learning Outcomes

The internship at REDCYBERFOX LLP provided valuable learning opportunities and helped in developing both technical and professional skills.

The major learning outcomes include:

- Understanding the fundamentals of web development
- Developing responsive and user-friendly web interfaces
- Writing efficient JavaScript code
- Building modern web applications using React
- Using Git and GitHub for version control
- Debugging and testing frontend applications
- Deploying web applications on hosting platforms

The internship also helped in improving problem-solving abilities and gaining confidence in working on real-world software projects.

Overall, the internship provided a strong foundation in frontend development and prepared the intern for future career opportunities in the software industry.

Skills and Knowledge Gained

4.1 Technical Skills

During the internship at REDCYBERFOX LLP, several technical skills related to frontend web development were developed. These skills helped in understanding how modern web applications are built and deployed.

The major technical skills gained during the internship include:

HTML Development

HTML was used to structure web pages by creating elements such as headings, paragraphs, images, forms, and navigation menus. The internship helped in understanding proper webpage structuring and semantic HTML elements.

CSS Styling and Layout Design

CSS was used to design the visual appearance of web pages. Various styling techniques were used including:

- Colors and typography
- Layout design using Flexbox
- Box model concepts such as margin, padding, and borders
- Responsive design using media queries

Frameworks like Tailwind CSS or Bootstrap were also used to create responsive layouts efficiently.

JavaScript Programming

JavaScript was used to make web pages interactive. Various programming concepts were practiced such as:

- Variables and data types
- Conditional statements
- Loops and functions
- Event handling
- DOM manipulation

These concepts helped in building dynamic web applications.

React Framework

React was used to build modern web applications using component-based architecture. The intern learned:

- Creating reusable components
- Passing data using props
- Managing state using hooks
- Handling events in React
- Implementing routing using React Router

Version Control

Git and GitHub were used for version control and collaboration. The intern learned how to:

- Create repositories
- Commit code changes
- Push code to remote repositories
- Manage branches
- Collaborate with team members

Web Application Deployment

Frontend applications were deployed using hosting platforms such as Netlify or Vercel. This helped in understanding how web applications are made accessible on the internet.

4.2 Practical Exposure

The internship provided valuable practical exposure to the real working environment of a software development company.

The intern gained experience in:

- Working on real frontend development tasks
- Creating responsive website layouts
- Debugging frontend code
- Collaborating with team members
- Participating in project discussions and reviews
- Testing applications on different browsers and devices

The practical exposure helped in understanding how theoretical knowledge learned in college can be applied to real-world projects.

4.3 Soft Skills Developed

Apart from technical knowledge, several soft skills were developed during the internship.

Communication Skills

The intern improved communication skills through interactions with mentors, team members, and other interns during project discussions.

Teamwork

Working with a development team helped in understanding the importance of collaboration in software development projects.

Time Management

Completing assigned tasks within deadlines helped improve time management and work planning skills.

Problem-Solving Ability

Debugging errors and fixing issues in code improved analytical thinking and problem-solving abilities.

These soft skills are essential for professional growth and success in the software industry.

4.4 Health, Safety, and Ethics

During the internship, certain guidelines were followed to ensure a safe and professional work environment.

Health and Safety

The organization maintained a safe working environment with proper workstations, electrical safety measures, and comfortable working conditions for employees and interns.

Professional Ethics

The intern followed professional ethics such as:

- Respecting workplace rules and policies
- Maintaining discipline and punctuality
- Following instructions from mentors and supervisors
- Maintaining confidentiality of company data and client information

These practices helped in understanding the importance of professionalism in the workplace.

4.5 Mapping with PO and PSO's

The internship helped in achieving several Program Outcomes (PO) and Program Specific Outcomes (PSO) as defined in the engineering curriculum.

Program Outcomes Achieved

PO1 – Engineering Knowledge

Applied basic engineering and programming knowledge to develop frontend web applications.

PO2 – Problem Analysis

Identified and solved programming errors and design issues during project development.

PO3 – Design and Development of Solutions

Designed responsive web interfaces and developed interactive web pages.

PO5 – Modern Tool Usage

Used modern development tools such as VS Code, Git, GitHub, and React.

PO9 – Individual and Team Work

Worked collaboratively with mentors and team members during project development.

PO10 – Communication

Improved communication skills through project discussions and reporting.

Challenges and Solutions

5.1 Problems Faced During Internship

During the internship, several challenges were faced while learning and implementing frontend technologies.

Some of the major challenges include:

- Difficulty understanding advanced JavaScript concepts.
- Debugging frontend code and identifying errors.
- Managing responsive layouts for different screen sizes.
- Learning React component structure and state management.
- Integrating APIs with frontend applications.

These challenges are common when learning modern web development technologies.

5.2 Solutions Implemented

The challenges faced during the internship were resolved through several methods.

- Seeking guidance from mentors and senior developers.
- Practicing coding exercises regularly.
- Studying official documentation and online learning resources.
- Testing applications on different browsers and devices.
- Debugging code step by step using developer tools.

These solutions helped in improving technical understanding and coding efficiency.

5.3 Limitations

Although the internship provided valuable learning experience, certain limitations were observed:

- Limited exposure to backend development technologies.
- Short duration for learning advanced frameworks in depth.
- Limited involvement in large-scale industry projects.

Despite these limitations, the internship provided strong foundational knowledge in frontend development.

4.5

Internship PO's and PSO's Mapping Template

Guidelines for Students

- Identify the major activities performed during the internship (testing, design, troubleshooting, simulation, documentation, teamwork, etc.).
- Map each activity with the relevant Program Outcomes (POs) and Program Specific Outcomes (PSOs).
- Use the contribution scale: 3 – High, 2 – Moderate, 1 – Low.
- Provide a short justification explaining how the internship activity helped achieve the outcome.
- Map only relevant POs/PSOs instead of mapping all outcomes.

Program Outcomes (POs)

PO No	Short Description
PO1	Engineering Knowledge
PO2	Problem Analysis
PO3	Design / Development of Solutions
PO4	Investigation of Complex Problems
PO5	Modern Tool Usage
PO6	The Engineer and Society
PO7	Environment and Sustainability
PO8	Ethics
PO9	Individual and Team Work
PO10	Communication
PO11	Project Management and Finance

Program Specific Outcomes (PSOs) : Program Related

PSO No	Description
PSO1	Applied programming and web development concepts to build interactive user interfaces.
PSO2	Gained exposure to modern web frameworks and frontend application

	development techniques.
--	-------------------------

Sr. No	Internship Activity / Task Performed	Skill Developed	Relevant PO	Relevant PSO	Contribution Level (1–3)
1	Learning HTML structure and webpage elements	Web development fundamentals	PO1	PSO1	3
2	Designing web page layouts using CSS	UI design and styling	PO3	PSO1	3
3	Implementing responsive design using media queries	Responsive web design	PO3	PSO1	3
4	Writing JavaScript for interactive web features	Programming and logic building	PO2	PSO1	3
5	Creating a To-Do List web application	Frontend application development	PO3	PSO1	3
6	Debugging JavaScript errors using browser developer tools	Problem solving and debugging	PO2	PSO1	2
7	Using Git for version control	Code management	PO5	PSO2	2
8	Uploading projects to GitHub repository	Project collaboration	PO5	PSO2	2
9	Learning React components	Modern frontend framework	PO5	PSO2	2

	and state management	usage			
10	Deploying frontend applications using Netlify / Vercel	Web deployment skills	PO5	PSO2	2
11	Participating in team discussions and meetings	Teamwork and collaboration	PO9	PSO2	2
12	Presenting project progress to mentors	Communication skills	PO10	PSO2	2
13	Understanding project workflow and task allocation	Project management basics	PO11	PSO2	1
14	Following professional ethics and company rules	Professional ethics	PO2	PSO2	2
15	Documenting daily internship activities	Technical documentation	PO10	PSO2	2

Justification:

The internship at REDCYBERFOX LLP provided a valuable opportunity to gain practical knowledge and experience in the field of **Frontend Web Development**. The internship helped bridge the gap between theoretical knowledge learned during academic studies and real-world industry practices.

During the internship period, various frontend technologies such as **HTML, CSS, JavaScript, and React** were learned and applied in practical tasks. These technologies were used to design responsive and interactive web interfaces. The experience helped in understanding how modern web applications are developed, tested, and deployed.

The internship also provided exposure to important development tools such as **Visual Studio Code, Git, GitHub, and browser developer tools**. These tools are widely used in the software industry for coding, debugging, version control, and collaboration. Learning to use these tools improved productivity and helped in understanding professional software development workflows.

Another important aspect of the internship was the opportunity to work in a professional environment. Interaction with mentors and team members helped improve communication skills, teamwork, and professional behavior. The internship also emphasized the importance of discipline, responsibility, and ethical conduct in the workplace.

The challenges faced during the internship, such as debugging code and learning new frameworks, helped improve problem-solving abilities and technical confidence. Overcoming these challenges contributed significantly to the overall learning experience.

Overall, the internship was a highly beneficial learning experience that enhanced both technical and professional skills. It provided practical exposure to the software development process and strengthened the foundation required for pursuing a career in the IT industry. The knowledge and experience gained during this internship will be valuable for future academic projects and professional growth in the field of software and web development.
